Smartaira 360 Managed Wi-Fi

Community-wide Connectivity

Smartaira 360 is a single, secure, high-performance, community-wide network infrastructure that allows residents to roam from their apartment to the pool without losing connectivity, performance, or privacy.

Enterprise Infrastructure

The enterprise-grade network architecture uses wireless access points instead of modems and routers. This means there's less Wi-Fi "noise" and 10x faster upload speeds.

Unlimited Data

With Smartaira 360, residents will have unlimited data and symmetrical speeds to stream, work, video chat, or download as much as they want from anywhere on the property.

Hassle-free Onboarding

Smartaira 360 integrates with your property management software (PMS) to automatically onboard residents at move-in. Our cloud-based automation collects their information, provisions an account, and sends their credentials via email and text without troubling your onsite team.

Personal, Private, and Secure

Residents instantly connect to the community's pre-installed Wi-Fi network using their personal credentials and QR code. Their data, devices, and activity are kept private and secure, segmented from others in the community.

Concierge-style, 24/7 Support

Premium multilingual phone support is available for residents 24 hours a day, 7 days a week. Network circuits, equipment, performance, and reliability are monitored around the clock.
